**ADVANCED
TECHNOLOGY
WORLDWIDE**

GROWING TOGETHER WITH THE FOCUS ON THE INDIVIDUAL

Advanced technology, innovations and the focus on the individual are key aspects of the Handtmann Group of Companies. We are renowned worldwide for our strategic, dynamic, and authentic approach.

The company has its roots in the Swabian town of Biberach, from where the Handtmann family of entrepreneurs has been operating for five generations. We are a blend of modernity and tradition, and we

stand for fascinating technology, as well as economic and social responsibility. With a strong focus on people, we combine the flexibility of a family-run company with state-of-the-art technology.

With our five divisions, we stand for trend-setting ideas and successful joint development.

Light Metal Casting

In-house developed and manufactured precision components

Systems Engineering

Efficient systems for the mobility of tomorrow

Processing

Premium technologies for the food industry

Entrepreneurial boldness, vision, and a passion for perfection form the basis of our extensive product range. Whether mechanical engineering, food technology, automotive industry, or plastics engineering: We are actively involved in many different industry sectors, where we are committed to innovation, sustainability, and autonomy.

Our experts bring together cutting-edge technologies, professional management skills, and hands-on user

insights from all over the world. You, as a customer, benefit from reliable processes – from the initial consultation all the way through to installation and after-sales support – and from products that precisely meet your requirements.

We place great importance on the motivation and personal development of our employees, as their commitment translates into market success, sound growth, and customer proximity worldwide.

Process Technology

Optimum feeding, processing, and storing of different media

Plastics Engineering

High-performance components and complete systems made from plastic

"At Handtmann, we recognize reliable values, passion, technology, and success – and above all a terrific team. This is the basis on which we grow our company with an eye to the future!"

We reliably bring high-precision light metal solutions to series production

Handtmann offers expertise in light metal casting, from the initial idea to the series-ready component: Bespoke alloys, innovative casting processes, and precise finishing enable sophisticated solutions. We set standards in quality and technology. With over 2,300 employees, Handtmann is the largest family-owned aluminum foundry in Germany – and has been for five generations. Leading manufacturers worldwide rely on our development expertise, innovative strength, and dependability.

As a development partner we consult closely with our customers. Simulation, design and topology optimization as well as additive prototyping provide a solid foundation. Our high-pressure die casting plants with closing forces of 840 to 6,100 metric tonnes are capable of producing both compact components and large-format aluminum components. Procedures such as MegaCasting, Semi-Solid Processing, and AI-based intelligent process control ensure maximum precision and efficiency in high-volume series production.

Our locations in Germany, Slovakia, and China deliver performance, quality, and flexibility – from standard high-pressure die casting to customized special solutions. The Biberach location stands for maximum automation and ready-to-assemble results.

Our light metal solutions are shaping the mobility of tomorrow – from components for ICE trains and structural or chassis components to components for PHEV, BEV and fuel cell applications. Proactive investments in new technologies drive our transformation efforts. We combine technology, efficiency, and sustainability – for components that stand out for their quality, reliability, and conservation of resources. **Handtmann – your 360° solutions partner. Close, flexible, result-oriented.**

“Together, we implement innovations that make a difference.”

Innovative battery and drive solutions for the mobility of the future

We are your partner for industrialization when it comes to bringing innovative vehicles and future technologies to market as quickly as possible. Handtmann Systems Engineering is with you every step of the process: from the initial concept idea to design and consistent series development, right through to production. Our unrivaled understanding of systems and processes empowers us to provide you with comprehensive and proactive support.

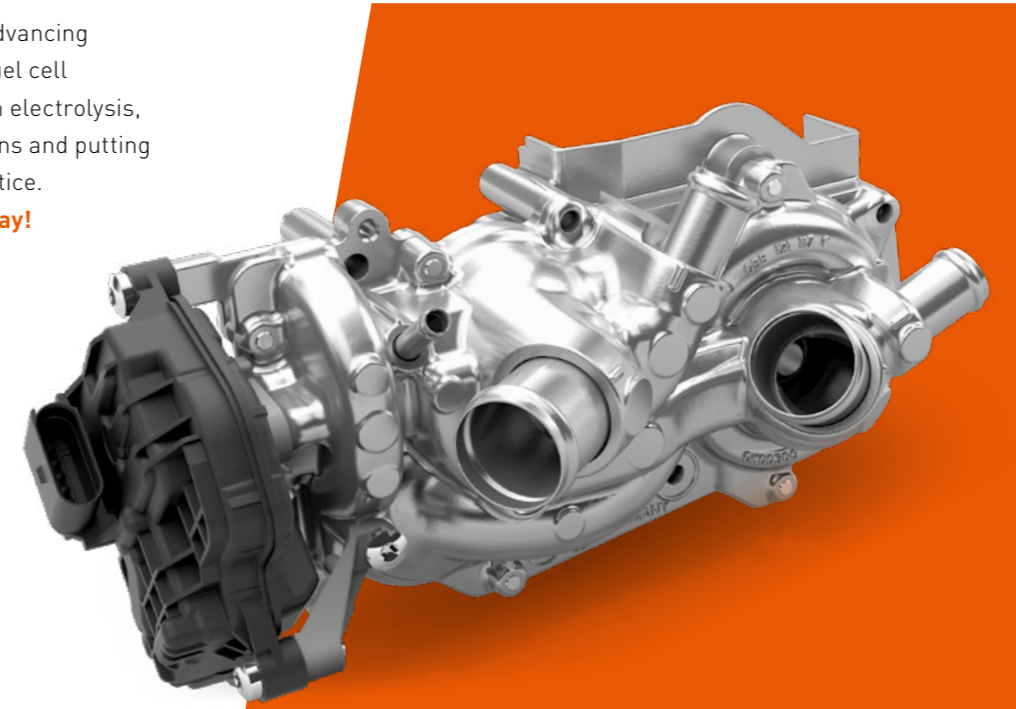

As a Handtmann customer, you get to benefit from our many decades of experience in developing and implementing complex integrated system solutions for leading car manufacturers. At the same time, you will find us to be a flexible partner who can efficiently and reliably handle even large volumes. We use our highly automated production facilities to manufacture customer-specific modules and systems for both conventional and electric drive systems.

Especially in times of change, dynamism is of great importance. We work with our partners to bring cutting-edge technologies into production quickly, safely, and efficiently. Partner with us to benefit from continuous research, expert guidance, and custom development, so you can leverage the advantages of next-generation electrification. Whether you need electric drive systems, high-performance high-voltage storage solutions, or readily available modular battery systems, we can support you with customized solutions that are fully scalable in terms of capacity, performance, and dimensions.

Do you want to make purposeful progress? Choose Handtmann: We tackle complex technical issues with passion, team spirit, and a sense of responsibility, most recently, for example, for manufacturers of construction machinery, intralogistics, utility vehicles, and boats.

We are also highly committed to advancing innovative technologies, such as fuel cell technology. In the field of hydrogen electrolysis, we are working on creative solutions and putting sustainable energy ideas into practice.

Creating tomorrow's mobility today!

We are the solution partner with line and process expertise

Consistent commitment to the customer has been the key to making Handtmann one of the world market leaders in food processing for more than 70 years. The development and manufacture of integrated line solutions for food processing is our core competency. This includes product preparation, processing, and handling, as well as interfacing with downstream processes. When it comes to technologies such as grinding, emulsifying, mixing, portioning, dough dividing, dosing, forming, linking, tying, or co-extruding food – ask Handtmann! Our portfolio also includes factory-remanufactured machines as well as digital and customized solutions.

Under the motto LEADING IN PROCESSING, we actively shape the future of food processing. We work on ideas that promote energy-efficient technologies just as much as products using alternative proteins. Our CONNECTING ORANGE slogan stands for a cooperative and globally networked approach – within the team, with customers, and with partners worldwide. The Handtmann Forums provide an ideal platform for inspiration and knowledge transfer, machine demonstrations, product developments, and seminars covering the entire industry. We are represented in over 100 countries: with our own sales companies, a strong partner network, and through strategic collaborations.

Benefit from the Handtmann Processing expertise: connective. premium. smart.

VISIONARY IN **FOOD** **PROCESSING** AND FOOD INNOVATION

PIONEERING EXPERTISE FOR HYGIENICALLY SAFE PROCESSES

| HANDTMANN PROCESS TECHNOLOGY

→
Valve block

We keep production moving.

As one of the world's leading suppliers in the food, dairy, and beverage industries, Handtmann Process Technology specializes in components and systems for the optimum feeding, processing, or storing of liquid, viscous, or pasty media.

Handtmann Process Technology sets the benchmark in the milk sector. CIP media filtration is used for lye filtration with a focus on sustainability and resource efficiency. By means of radial flow chromatography (RFC), our customers can obtain the anti-inflammatory protein lactoferrin for use in baby food or nutrition for athletes. Downstream, radial flow chromatography columns are the centerpiece of adsorption in the industrial chromatography systems designed and manufactured by Handtmann.

Handtmann Process Technology uses its extensive experience to work with customers and partners in its in-house laboratory on the research and development of customized processes and concepts for new applications in the cosmetics, chemical, biotechnology, and pharmaceutical industries, as well as the new food sector. This includes removing off-flavors from collagen, sugar decolorization, extracting potato proteins from potato juice, or riboflavin from lactose.

Piloting and commissioning at the customer's premises is the responsibility of Handtmann technologists familiar with the latest analytical methods and technology.

In the beer sector, the world's largest breweries, microbreweries, and the craft brewer community rely on Handtmann equipment. Our process technology experts take care of planning, design and control of pipe fences, valve blocks and yeast management systems, fermentation, storage and pressure tank cellars, CIP systems, and the Handtmann CSS beer stabilization system for the removal of polyphenols from beer. Safety and vacuum valves as well as cleaning and air valve combinations are used individually or configured on tank dome cap, starting with tank protection. Our in-house development and production also cover safety and process components such as the INOVA double-seat valve.

Your progress is what motivates us.

INTELLIGENT MATERIALS FOR HIGH-QUALITY SOLUTIONS

↑ Lug made from LTK® composite

↑ Rollers, chain wheels and toothed wheels made from LTK® Pure and LTK® Metal Core

We supply plastic products for every industry and every requirement.

The new organizational structure of Handtmann Plastics Engineering offers a diverse product portfolio and attractive synergies. In this organizational structure, Handtmann Elteka stands for the high-performance, internationally market-leading engineering plastic Lauramid®. This highly durable polyamide, featuring optimal physical and chemical properties, is the problem solver in medical engineering, the packaging and food industries, as well as in mechanical engineering, the automotive industry, warehousing and materials handling, and in the field of renewable energy. Lauramid® is offered as a semi-finished product, as a molded cast part, as well as CNC machined components.

Kegelmann Technik, a leader in the manufacture of models, prototypes, tools, and end products for decades, is the ideal addition. Its success is based on technological expertise and an enormous range of manufacturing processes, such

as 3D printing, RIM processing, and injection molding. Many customers, particularly from the automotive, aeronautics and aerospace sectors, rely on Kegelmann Technik for the development of new parts and innovative products. Numerous certifications attest to the company's high standards.

Complementary end-to-end engineering services and the supply of innovative finished parts create a win-win situation for our customers. While Kegelmann Technik supports Elteka customers in product development, Handtmann Elteka supplies Kegelmann Technik with materials. In close cooperation with customers, suppliers, and research institutes, we develop economical, high-precision, and reliable applications. **Join us in shaping the future of materials and finished parts with your expertise.**

TARGETED SUPPORT FOR PRODUCING DIVISIONS

We provide the systemic backdrop for an effective work environment.

Five top performers – one support system: Handtmann Service provides the backbone for the Light Metal Casting, Systems Engineering, Processing, Process Technology, and Plastics Engineering divisions with expert consultation and services. Handtmann Service takes care of finance and accounting, human resources, information technology, technical services, security, environment, health, and much more.

Consequently, the divisions operating on the market gain additional scope in their activities, can focus on their core competences, and benefit from expert knowledge and synergies. At the same time, we ensure high quality throughout in the handling of general tasks, thus achieving reliable cost efficiency with flexibility in personnel deployment for the Handtmann Group of Companies.

Two examples: Handtmann Service is responsible for and manages the training of around 100 young professionals in commercial and technical professions, and also organizes individual training courses and programs for the workforce. Every year, Handtmann invests large sums in securing existing jobs and creating new ones.

The Security, Environment, and Health department is in charge of ensuring the optimal integration of all topics relating to environmental and sustainability management, energy management, plant safety, health protection, and occupational safety in all processes. Acting responsibly takes on many forms at Handtmann.

Your trust is well-founded.

A STRONG GROUP? COUNT ON IT. AT HANDTMANN

“We take inspiration from our development!”

The message conveyed by Markus Handtmann and Valentin Ulrich: Our company's economic success proves us right. By combining our individual strengths, we jointly create leading high-tech products and innovations.

We live in a world where progress and responsibility are inextricably linked. Our success is measured both by technological milestones and by how we manage our resources, and preserve the world we live in.

Being a family business rooted in Swabia, innovation, fairness, truthfulness, and trust count among the Handtmann Group of Companies' core corporate values. We focus on independent decision-making and responsibility, short communication channels, and an intercultural, informal working atmosphere.

We are also fully committed to continuously reducing our energy consumption and emissions. For us, sustainability is not an optional extra, but an integral part of our development.

Our group's success builds on the dedication, knowledge, and enthusiasm of our employees. With their diligence and innovative strength, they are shaping the future of our company.

As an employer, we create the necessary conditions: We offer modern workplaces, the latest technologies, flexible working time models, wide-ranging opportunities for further development, and fair remuneration.

Our employees also benefit from numerous fringe benefits from bicycle leasing and company pension plans to a vibrant corporate culture with regular feedback and events. Details can be found at www.handtmann.com/karriere.

We are leading the way – in our region, and around the globe. **Grow with us.**
